

Replicator for Hummingbird DM >>>

FEATURES

- Synchronizes all your library validation tables.
- Uses unique Master-to-Master replication and does not require a source library.
- Replicates to any number of libraries even across a WAN.
- Replicates standard and custom data including client/matter, people, groups and document type.
- Replaces time consuming database imports.
- Includes an initialization utility to prepare pre-existing libraries.
- Utilizes Hummingbird DM API.
- Supports MS SQL and Sybase.
- Runs as a Windows Service for unattended operation.
- Integrates with Hummingbird DM Library Maintenance.

BENEFITS

- Saves hours of valuable time.
- The Hummingbird DM administrator controls which validation tables are to be replicated.
- High-speed transfers can be scheduled to run automatically and unattended, or manually.
- Easy to use interface.
- Straightforward installation.
- Easy scheduling of standard predefined replication jobs.

How do you go about synchronizing multiple libraries? What about adding a user who needs access to multiple libraries? What if the New York office requires the same information the Los Angeles office has? How do you make this happen efficiently and reliably? Replicator for Hummingbird DM allows the Administrator to concentrate on more productive work by simplifying the administrative task of library synchronization.
